Make Every Restoration Bioactive

Glass ionomers are one of the earliest bioactive restoratives developed to release fluoride. New GC Fuji® Automix LC offers exceptional fluoride release and moisture tolerance. Furthermore, when used in combination with MI Paste® ONE, the restorations can be recharged with fluoride. MI Paste® ONE provides bioavailable calcium and phosphate ions in addition to fluoride. Thus, the combined use will both restore and remineralize teeth! GC Fuji® Automix LC can be used for a variety of indications in primary and permanent teeth. Essentially, you can make every restoration bioactive!

Indication						
Primary teeth	✓	✓	✓	✓	✓	✓
Permanent teeth			✓	✓	✓	✓
