Stigma takes the person out of the picture

A person in silhouette is shown from the side, facing a group of people. The background is a light blue wall. The text is overlaid on the right side of the image.

“This review indicates that **negative attitudes** of health professionals towards patients with substance use disorders are common and contribute to **suboptimal healthcare** for these patients.”

A person in silhouette is shown from the side, facing a group of people. The background is a light blue wall. The text is overlaid on the left side of the image.

“In experimental research, the word “**abuser**” was found to **increase stigma**, which can affect quality of care and act as a barrier to treatment seeking in individuals suffering from addiction. Instead, many have recommended the use of terms that reflect a disorder (e.g., “**substance use disorder**”) and use of “person first” language.”
